Title	From Efficiency to Eco-productivity: Bogota´s greening bylaws
Group of topics	June 20 th , 2017 Funding and other financial incentives - Strategies for building greenup
Language	english
Content	<p>Three bylaws envision Bogota´s green infrastructure future: the policy on eco-urbanism and sustainable construction from 2014 to 2024 (Bylaw 566), the green building recognition program (Bylaw 3654) and the roof greening guidelines (Bylaw 418).</p> <p>As the city´s major urban planning regulations (POT) are currently under revision, these 3 bylaws set the roadmap for a number of local programs designed to adapt the city to climate change and augment people´s and local ecosystems´ health. Particular focus is given to environmental services related to air quality, water cycle and heat island effect. This approach that aims to enhance overall Bogota region´s environmental quality brings conservation, restoration, building efficiency and building eco-productivity together under the same green canopy.</p>
