

Information about the lecture

Speaker	Steven Peck
Title	Biophilia, Design and the Bottom Line: How Biophilic Research is Shaping Green Infrastructure and Improving Return on Investment
Group of topics	June 20th, 2017 Overview case study examples from North American
Language	English
Content	Insights from biophilic research related to the human body and economic impacts are providing new insights in how to design environments that contribute to better health and economic outcomes. This presentation will highlight some of these key insights and give case study examples from North American projects.
