

Information about the lecture

Speaker	Prof. Dr. Thomas Schröpfer
Title	Dense and Green: Innovative Building Types for Sustainable Urban Architecture
Group of topics	21.06.2017 City of the Future
Language	English
Content	Dense + Green explores innovations in architectural typologies that emerge from the integration of green components, such as sky terraces, green facades, and vertical parks, in high-density buildings. In-depth case studies of various building types are presented with information on the technical and ecological as well as the landscape and urban design aspects of the new dense and green paradigm.
